Zyxel Router Port Forwarding Setup for Geovision DVR
1. Log into your Zyxel Router by typing in the following gateway into your web browser http://192.168.1.1 [By default Username: **admin** Password: **1234**]

2. Click the **"NAT"** link.

3. There should be a dot in the **"SUA Only"** setting. If this isn't the case, you cannot setup port forwarding without making a major change to your network. I wouldn't advise changing this unless you know what you are doing. Alright, if there is a dot in the" **SUA Only"** setting, go ahead and click **"Edit Details"**.

4. Now fill in the following:

5. **Start Port No:** 80
   End Port No: 80
   IP Address: IP Address of the Geovision DVR

Do this for ports 80, 4550, 5550, 8866, 5511 and name each application differently. Example – Geovision DVR 1 , Geovision DVR 2 , etc. (**Note**: Each application must be uniquely named or else it will not work)

6. Once finished press the **"Save"** button.
