

# ZyXel Router Port Forwarding Setup For iDVR-PRO

1. Log into your ZyXel Router <http://192.168.1.1> [By Default Username: **admin** Password: **1234**]
2. Now Click on the NAT link.

- There should be a dot in the **SUA Only** setting. If this isn't the case, you can not setup port forwarding without making a major change to your network. I wouldn't advise changing this unless you know what you are doing. Alright, if there is a dot in the **SUA Only** setting, go ahead and click **Edit Details**.

- Now fill in the following info:

	Start Port No.	End Port No.	IP Address
1			

**Start Port:** 8080  
**End Port:** 8080  
**IP Address:** The IP address of your DVR

Now you will need to create a separate rule

**Start Port:** 554  
**End Port:** 554  
**IP Address:** The IP address of your DVR

When you're finished, click **Save** near the bottom of the screen to save your changes
