Introduction

GV-BL5700 is an outdoor camera for optimal day and night surveillance. GV-BL5700 can support H.265 video codec to achieve better compression ratio while maintaining high quality picture at reduced network bandwidths. For night operations, the camera allows up to 30 m (98.4 ft) IR effective distance. It also uses P-iris to produce images with better clarity and contrast.

Note:

- Specifications are subject to change without prior notice.
- Mind the following when using an inserted memory card for recording:

- Recorded data on the memory card can be damaged or lost if the data are accessed while the camera is under physical shock, power interruption, memory card detachment or when the memory card reaches the end of its lifespan. No guarantee is provided for such causes.
 - The stored data can be lost if the memory card is not accessed for a long period of time. Back up your data periodically if you seldom access the memory card.
 - Memory cards are expendable and their durability varies according to the conditions of the installed site and how they are used. Back up your data regularly and replace the memory card annually.
 - To avoid power outage, it is highly suggested to apply a battery backup (UPS).
 - For better performance, it is highly suggested to use Micro SD card of MLC NAND flash, Class 10.
 - Replace the memory card when its read/write speed is lower than 6 MB/s or when the memory card is frequently undetected by the camera.
3. GV-Eye does not support H.265 video codec. Set the video codec to H.264 when connecting the camera with GV-Eye.
