

HIGH DEFINITION SERIAL DIGITAL INTERFACE
OSD CONTROL – USER'S GUIDE

FEATURES

- **HD-SDI (1080P, 720P, 720P CROP)**

1/2.9 inch SONY CMOS (IMX-222) / 1 Lux at F1.2 / 0.1 Lux (B/W)

- **TRUE DAY & NIGHT (Option)**

This camera has a function that automatically selects the mode that is appropriate for daytime or night-time conditions. The COLOR mode operates in daytime conditions to provide optimum colors, and BW mode operates in nighttime conditions to enhance the definition of the image.

- **DNR (DIGITAL NOISE REDUCTION)**

By using the DNR chip, the amount of low illuminance noise has been significantly reduced, and the signal-to-noise ratio (S/N ratio) as well as horizontal resolution have been improved, resulting in a clear and sharp image display even in the dark.

- **WDR (WIDE DYNAMIC RANGE)**

By adopting a proprietary 1/2.9 inch SONY CMOS (IMX-222) chip, the camera delivers clear, high quality pictures even in backlight, by increasing exposure in dark areas while decreasing it in bright areas; a corrected image with clear details results.

- **PRIVACY FUNCTION**

The PRIVACY function enables you to select and record only chosen area among twenty-eight areas.

- **ADDITIONAL FUNCTION**

EXPOSURE, WHITE BAL, IMAGE, BACKLIGHT, DAY&NIGHT, DNR, MOTION SERIAL, SYSTEM, EXIT Function are also available.

- **CONTROLLED OSD MENU**

The camera can be controlled by selecting text displayed on the monitor screen.

PRECAUTIONS

Do not disassemble the camera.

There are no user-serviceable parts inside it.

Do not install the camera in extreme temperature conditions.

Do not use the camera under conditions where temperatures exceed Especially be careful for ventilation under high temperature.

Do not install or use the camera in an environment where the humidity is high.

It can cause the image quality to be poor.

Do not install the camera under unstable lighting conditions.

Severe lighting change or flicker can cause the camera to work improperly. It can cause malfunctions to occur.

Do not touch the front glass of the camera.

It is one of the most important parts of camera. Be careful it is not smudged by fingerprint.

Never keep the camera face to strong light directly.

It can damage the CMOS SENSOR.

Do not drop the camera or subject it to shaking.

It can cause malfunctions to occur.

Note

- If the camera is exposed to spotlight or an object reflecting the strong light, smear or blooming may occur.
- Please check whether the power satisfies the normal specifications before connecting the camera.

PART & FUNCTION

DIMENSION

FRONT

- ① Protective Lens Cap
- ② CS-Mount Lens Adapter

③ BACK FOCUS Lock Screws

These are two screws used to adjust the back focus of the camera which is normally set on factory default. These must be loosened (using an L-wrench) before the camera can be focused. After readjusting, lock the screws into place.

④ Tripod Mounting Holes

You can attach a mount to the camera from either the top or the bottom.

⑤ Auto Iris Lens Connector

When you use Auto Iris Lens, connect the lens plug to auto iris connector located on the side of the camera.

PART & FUNCTION

BACK

- ⑥ CVBS : It is a video analog BNC connector.
- ⑦ Power Input Terminal
Connects to the power source.
- ⑧ RS-485: This is the communication port to do the remote control OSD menu.
- ⑨ Function Switch.
- ⑩ Power Lamp
The power lamp turns on when connected to a power source.
- ⑪ HD-SDI : It is HD-SDI video signal output BNC connector.

CONNECTION

Please refer to the manual when connecting various instruments.

LENS

This camera is not supplied with a lens. Please purchase a lens that fits your needs.

Notes : - If the lens has fingerprints or other objects on the lens the image quality might be affected.

- A higher quality lens provides a better picture.

- ▶ Adjust the focus if the camera is out of focus for changing between daytime mode and nighttime mode.

1. Installing Auto Iris Lens

- ① Remove the protective cap and attach the lens into the camera by turning it in a clockwise direction.

- ② Connect the lens plug to the auto iris connector on the side of the camera.

2. Installing a CS-mount Lens

Remove the protective cover and connect the lens into the camera by turning it in a clockwise direction.

CONNECTION

3. Installing a C-mount Lens

- ① Remove the protective cap and connect the c-mount adapter turning it in a clockwise direction.
- ② Connect the lens into the camera by turning it in a clockwise direction.

► How to make IRIS plug connector

Remove the insulation from the outer and inner lens cables as shown in the drawing.

Remove the cover of the auto iris plug connector (supplied with the camera) and solder the lens cable to the pins as shown in the following configuration.

DC type

No.1 Pin Damping -
No.2 Pin Damping +
No.3 Pin Drive +
No.4 Pin Drive -

CONNECTION

CONNECTING POWER

Different models have different power specifications, so please check that you have the correct power source before making the connection.

1. AC/DC Dual Power

The camera has a common power input connector for both 12V DC and 24V AC. The unit has a wide power tolerance, within DC $12V \pm 10\%$ or within AC $24V \pm 10\%$.

* The Power input is non polarized.

AC24V / DC12V

2. DC Power

AC24V / DC12V

CONNECTION

CONNECTING THE CAMERA TO THE MONITOR

1. Connect the VIDEO out jack from the camera to the video in jack on the monitor.
Be sure the power is turned off before connecting the cable.

2. If using an intermediary device (DVR, VCR, etc.) between the camera and the monitor, please set it at Hi-Z and leave the monitor at 75Ω.

► Video cable.

The cable to connect a video output of the camera and the monitor is BNC coaxial cable same as the below. If the install distance between a camera and the monitor is over the max video transmission range, please use the separated video amplifier.

Max video transmission range	Recommended cable specification
100 ~140m	5C HFBT (75ohm)
200m	L-6CHD (75ohm) (SDI exclusive cable)

CONNECTION

CONNECTING TO RS-485 CONTROL CABLE

Using a RS-485 communication, it will be able to control the OSD menu at the System Controller or DVR.

- (1) The case which it controls from the PC

Using a RS-485 converter, It connects to RS-485 control cable outside camera and serial cable

EX) SERIAL PORT OF THE PC(COM1) → SERIAL CABLE → RS-485 CONVERTER → RS-485 CONTROL CABLE

- (2) The case which it controls from the DVR or System Controller

It connects the RS-485 control cable in the connection terminal of 485 control boards which are connected with the DVR or System Controller.

485 Control Board Connection Port	RS-485 Control Port
(+) CONNECTION TERMINAL (R+)	485+
(-) CONNECTION TERMINAL (R-)	485-

► RS-485 Communication establishment initial value

Item	Camera ID	BAUD RATE	UART MODE	RET PKT
Initial value	0	9600	8-NONE-1	Not supported

NOTES

- When you construct external control systems for a camera control, please use to the PROTOCOL or PELCO-D PROTOCOL.
- When you connecting to RS-485 control cable, please peel off the outer skin inside the RS-485 control cable.

CAMERA OPERATIONS

Above specifications may be changed without any notice.

CAMERA OPERATIONS

SETTINGS

Settings can be made using the 5 buttons located on the back of the camera.

Note

- 'MANUAL' menu for fixed lens models, 'DC' menu for auto iris models.
- Box type camera have both Lens menu.

1. Please press the SET button

- Settings can now be made. The SET menu is displayed on the monitor.
- To run the OSD menu, please press and hold the SET button for three seconds.

2. Please select any function you wish to activate by pushing the button Up or Down

- The cursor position will appear green on your screen.

You can push the button Up or Down to change function you wish to change.

CAMERA OPERATIONS

MENU

3. Please press the button Right or Left if you wish to change mode.
 - When the button is pressed Right or Left, available values and mode are displayed in order. Please keep press the button until you get the mode you wish.
4. Please select "EXIT" and then press the button to finish the setting.

SETUP

- EXPOSURE, WHITE BAL, IMAGE, BACKLIGHT, DAY&NIGHT, DNR, MOTION SERIAL, SYSTEM, EXIT control can be selected.
- When the MAIN MENU is on the screen, please position the cursor to SETUP by using the button. And then press the button.

CAMERA OPERATIONS

EXPOSURE

- When the SETUP menu screen is displayed, select EXPOSURE by using the Up and Down buttons so that arrow indicates EXPOSURE.
- Select a desired mode using the Right and Left buttons.

FIX

V/F

- SENS_UP : OFF / x2 / x3 / x4 / x5 / x6 / x7 / x8
 - Sens-up is realized in the most low illumination quality and it provides the image without a noise at the low illumination quality.
 - When it is night or dark, the camera automatically detects the light level and maintains a clear picture if this mode is activated.
 - When "SENS_UP" is on, shutter cannot be adjusted.

CAMERA OPERATIONS

- **BRIGHTNESS** : Left Key (Level DECREMENT), Right Key (Level INCREMENT)
- **LENS** : When using **BUILT-IN LENS**, the type of the lens is able to fix. (DC / MANUAL)
- **AE MODE** : Manual Lens mode (you can select **NORMAL** / **DEBLUR**)
DC Lens mode (you can select **INDOOR** / **OUTDOOR** / **DEBLUR**)
- **SHUTTER** :
 - You can select either auto or manual shutter.
(1/30, 1/60, 1/120, 1/240, 1/500, 1/1000, 1/2000, 1/4000, 1/8000, 1/16000, 1/30000, 1/60000)
 - Shutter is set to "Manual" when DC Lens is selected
 - Shutter is set to "Auto" when Manual Lens is selected
- **AGC (Auto Gain Control)** : The higher the gain level, the brighter the screen - but the higher the noise.
- **DOUT SCALE** :
 - You Can Select **FULL** / **COMP** / **USER**
 - The available image to level is (0~20)

WHITE BAL

- Use the White Balance function to adjust the screen color.
- When the **SETUP** menu screen is displayed, select 'White Bal.' by using the Up and Down buttons so that the arrow indicates 'White Bal.'
- Select a desired mode using the Right and Left buttons.

- **AUTO** : Default - This function continuously adjusts the white balance automatically to adapt to changes in lighting conditions.
- **AUTOext** : It is a mode to do a halogen and the special lighting to White detection.
- **PRESET** : This function adjusts the white balance regardless of the subject conditions.

- ACE (Adaptive Color & Contrast Enhancement) : OFF, LOW, MIDDLE, HIGH

ACE black performs an image Enhancement processing to enhance visibility of an image by changing the brightness values to the level that people can recognize the change. This processing technique is equivalent to the dynamic range reduction technique, Which converts the HDR (High Dynamic Range) into the restricted LDR (Low Dynamic Range)

CAMERA OPERATIONS

BLACKLIGHT

• HLM (High Light Mask)

Function is being prevented against headlights of vehicle effectively.
it is the most suitable function to see license plates at night.

- LEVEL: You can set the level point of HLM
- MODE :you can select (NIGHT ONLY / ALL DAY)

CAMERA OPERATIONS

• BLC (Backlight Compensation)

When there is a strong backlight behind the object, clear images of the background as well as the object can still be obtained by using the BLC function.

- BLC OSD : The area to apply the BLC function is shown in BOX shape.
- H-POS : You can move the range to apply BLC to Left and Right
- V-POS : You can move the range to apply BLC to Up and Down
- H-SIZE : You can increase and decrease the size of the range to apply BLC horizontally.
- V-SIZE : You can increase and decrease the size of the range to apply BLC vertically.

• WDR (Wide Dynamic Range) : OFF / LOW / MIDDLE / HIGH

Realize the improved backlight compensation function more than existed WDR (Wide Dynamic Range) with a fusion ratio of the optimum by pixel, when they composite both a shutter of high speed at the light area and the shutter of low speed at the dark area.

WDR (ON)

WDR (OFF)

CAMERA OPERATIONS

DAY & NIGHT

- AUTO : The camera will automatically show color image in high lux and black / white image in low lux.
- COLOR : This picture is always displayed in color.
- B&W : The picture is always displayed in black and white. You can turn on or off the burst signal on B/W mode.

DNR

- DNR (Digital Noise Reduction)

Improve S/N ratio and more clean the low illumination quality and can be monitoring at night clearly without the image drag and noise phenomenon.

- OFF : DNR function does not operate.
- LOW / MIDDLE / HIGH : You can select 'LOW', 'MIDDLE' or 'HIGH' menu as DNR condition.

CAMERA OPERATIONS

MOTION

Function of MOTION can designate the range of the user to detect the movement on the screen and adjust the size of the area. So, you can monitor the movement of an object on the given region more efficiently

- OFF : MOTION mode is cancelled.
- SET : Any motion in the selected areas is observed.

- MOTION ZOOM : You could set from "0" to "99" and D-Zoom is operated to the setting value when the moving is detected.
- SENSITIVITY : Set the sensitivity of the moving detection.
- TARGET SIZE : Set the target thing size to detect the moving. (0~255)
- PILING UP (SEARCH function) : It meets the operating conditions of the searchlight if the set value is same value or more by counting movements per second
- PAUSE TIME (SEARCH function) : If there is no movement during the setting value after the detection, it clears the count value of PILING UP and stops the searchlight operating.
- AREA : Select the range to apply motion (16 Zone)

- CVBS : you can select (NTSC / PAL)
- FRAME RATE : 1080P, 720P : Set output frame to 30 or 25, (Be set NTSC or PAL mode)
720P CROP : Set output frame to 60 or 50, (Be set NTSC or PAL mode)
- LANGUAGE : ENG, CHN, CHN(S), JPN, KOR,
- FOCUS ADJ

- ▶ Left box : Focus of the area of the low illumination
 - ▶ Middle box : Focus of the area of the intermediate illumination
 - ▶ Right box : Focus of the area of the high illumination
- If you move slowly lens, the green box will begin to appear
 - When you turn the lens for the green box not to be visible, Focus is the right.
 - It is possible only one box of three boxes is right.
- FACTORY SET : Factory initialize

EXIT

- Saves all the setting menus and then exits.

TROUBLE SHOOTINGS

If there are problems in operation, please refer to the items below. If the problem persists, please contact the agent you purchased this product from.

Nothing appears on the screen.

- Please check the power connection.
- Please check the video signal line connection.

The video image is not clear.

- Please check if the lens is clean.
Please clean the lens with a clean cloth or brush.
- Please adjust the contrast feature of the monitor.
- Please make sure that the screen is not exposed directly to a bright light.
Please move the camera if necessary.
- Please readjust the back focus of the camera.

The screen is dark.

- Please adjust the contrast feature of the monitor.
- If you have an intermediate device, set the 75Ω/Hi-z properly, and check the terminals.
- Please check if an auto iris lens is being used and adjust the brightness level.

TROUBLE SHOOTINGS

The MOTION DETECTION function is not working.

- Please check if 'MOTION DETECTION' mode is turned on.
- Please check if the MD SENSITIVITY is too low.
- Please check the setting of the MD AREA.

Colors are not quite right.

- Please check the 'WHITE BAL' setting.

The screen is flickering.

- Please check if the camera is facing directly into sunlight or fluorescent light.
- Please check if an auto iris lens is being used.
- Please check the connection of the lens connector cable.

There is a problem with the camera operation. The camera surface is too hot and black stripes appear on the screen.

- Please check if an appropriate power source to the camera complies with the manufacturer's standard requirement, or if the voltage keeps changing.

SPECIFICATION
